

DESKTOP PRESETS INSTALLATION*

Unzip the file

Unzip by double clicking on the zip file.

Open the folder

Open the folder to access the presets. Any file ending in .xmp or .lrtemplate is a preset. (.lrtemplate is for older verisions of Lightroom & may not be needed.)

Open Lightroom

Import presets: 01

Method 01: click the '+' in the presets section in the Develop module.

Import presets: 02

Click on Import and find the folder with the presets.

Method 02: Go to:
Lightroom >
Preferences > Presets
Click on the box titled:
Show Lightroom Presets

Double click on the
Lightroom folder.

Double click on the
Develop Presets folder.

Copy the presets into the
Develop Presets folder.

Restart Lightroom

All of your presets will now be saved in the presets section of the Develop module within Lightroom.
